

An Unconventional Look At The Business World –

An alternative to alternative cars

Posted by Al Lewis on Dow Jones Newsletter September 20, 2009

(PHOTOS: Eddie Sturman and his wall of patents. Sturman's name is on 90 patents. An engine modified with Sturman's technology.)

Engineering genius [Eddie Sturman](#) wants to take the internal combustion engine into the digital age.

He says the engines we've been using in our cars for 100 years would be up to 50% more efficient if we simply replaced their cam-driven valves with digital technology. Emissions would be a lot cleaner, too.

Sturman argues it's a better alternative than hybrids and electric cars. And his motors could burn just about any fuel from natural gas to biofuels.

[Click here](#) to read Al's article on the Sturman Smart Environmental Engine.
